

Software Quality Assurance Manager (m/f)

The COBI.bike Software Development Team is looking for a Quality Assurance Manager with a track record of supporting the development of high quality hard- and software products. You'll work closely with our mobile, cloud and embedded engineers to raise the quality bar across the entire product line.

As a Software Quality Assurance Manager, you will play a key role in our quality assurance process by coordinating testing efforts across our internal and external testing groups, performing manual and automated tests, reporting and verifying defects, and signing-off on features. You will own authoring and the execution of test plans and test cases. You will have a significant impact on the quality and delivery speed of our soft- and hardware, our business, and most importantly our customers.

What connects us is a passion for cycling, digital technology, and design as well as the desire to try out new things and always question the status quo.

COBI has established a brand new market segment, of which we are the leader. Our partners value this and want to take advantage of this. All of our marketing activities are aimed at making COBI touchable and tangible. We scrutinize every action to ensure that it delivers the COBI experience – whether by trying it out, listening to experiences from others or of a trusted partner. The user, rather than technology, is our key priority. Recently acquired by Bosch eBike Systems, our technical know-how will be combined with Bosch's global market share. For us, this is undoubtedly a significant step into the future.

The position is located in Frankfurt/Main Germany.

Primary Responsibilities:

- Create and execute feature-level test plans with our apps, devices and cloud APIs – on and off the bike.
- Contribute to the existing test automation efforts.
- Instruct external testers how to perform test cases and document results.
- Investigate, log, track, and triage bugs to determine root cause and establish prioritization in coordination with the customer service team.
- Track inventory of test devices including bikes, e-bikes, smartphones and hubs.
- Organize and coordinate test efforts across different testing groups.
- Establish new or modified testing workflows and techniques to improve testing efficiency and outcome.
- Manage and foster public beta community and drive adoption of new participants.

Requirements:

- Passionate about quality and software testing
- Must be skilled at producing accurate and punctual reports & delivering presentations/training.
- Must have the ability to communicate complicated or difficult information clearly and diplomatically.
- Must be adept at handling pressure and uncertainty and adjusting work plans to meet changing company/department needs.
- Experience with writing and executing test plans on mobile platforms (iOS, Android) and Embedded systems.
- Excellent analytical and troubleshooting skills.
- Excellent verbal/written communication skills in German and English.
- Experience with wireless technologies (Bluetooth, ANT+ or Zigbee) is a plus.
- Basic scripting skills (Python or Javascript) is a plus.
