Internship Android Development (f/m)

As a college intern on our android team, you will play an important role in our app's development process. You'll work with designers to ensure that upcoming features fit the android design guidelines and make sense as a part of our android app. As a developer, you'll work with senior members of the android team to create new features in the android app.

In this position, you'll be challenged to grow professionally by creating pixel perfect features that work well on everything from a 3.5" phone to a 10" tablet. You will collaborate closely with our concept, design, cloud and embedded teams to ensure a seamless integration of the Android app in our COBI eco system. You will learn about the entire workflow of creating apps professionally, from design through testing, release and bug fixing.

What connects us is a passion for cycling, digital technology and good design as well as the desire to try out new things and always question the status quo. We want to make a difference and put ourselves at the forefront of a new movement.

COBI has established a brand new market segment, of which we are the leader. Our partners value this and want to take advantage of this. All of our marketing activities are aimed at making COBI touchable and tangible. We scrutinize every action to ensure that it delivers the COBI experience – whether by trying it out, listening to experiences from others or from a trusted partner. The user, rather than technology, is our key priority.

The ideal candidate will have a great passion for COBI and execute all activities with respect to the COBI brand strategy.

Responsibilities

- Design and build advanced applications for the Android platform
- Collaborate with cross-functional teams to define, design, and ship new features
- Analyze requirements, wireframes and capabilities of related systems to propose appropriate solutions
- Assist engineers in the creation of requirements, timelines and estimates

Your Profile

- You have first experience developing for Android. You use the devices daily and you're passionate about the platform
- You either have strong front-end / UI experience and love making your apps look and feel amazing or you are a backend enthusiast which loves to establish a clean architecture and build stable processed which drive the UI. No worries if you can handle both, that's even better

- You are able to translate complex, real-world problems into simple and elegant software solutions
- Easily understand the balance between crafting a robust, lasting solution and banging something out right now
- You have a deep passion for code and product. You care about the craft of writing software and fight for the details that separate an average product from a great one
- Have your work used by passionate customers across the globe who rely on it to do their job on a daily basis
