

Join the movement

COBI further expands its management team in the field of research and development.

Yonggang Du has been COBI's Head of Research & Development since September 1, 2016.

An electrical engineer and a native of China, Yonggang Du's previous credits include heading the innovation division at Philipps and launching platform-driven systems at Bosch/Siemens Home Appliances. Most recently, he was active as a freelance businessman before joining COBI.

Yonggang Du is now responsible for the development, quality assurance and production of COBI's existing and future global product portfolio. As a high-tech company in the bicycle industry, COBI places the utmost priority on quality and relies on ultramodern technologies in the development of its software and hardware. The objective is to offer a visually appealing, technically outstanding and affordably priced product.

Andreas Gahlert, COBI's founder and CEO, is happy about the strong support: "With Yonggang Du, we've brought onboard a genuine specialist who enriches COBI with his experience as a businessman and his expertise as an engineer. His close ties with China, where our products are manufactured, is the icing on the cake and makes him the absolute best person for this task field."
